

AUTO CHICK DRINKER

Auto Chick Drinker is suitable for day old chicks in their preliminary growth stage. It help chicks obtain water easily. For big scale rearing, it is important to get all chicks fed with water and food simultaneously during the 1st 3 hours of arrival to farm. Farmers found that using Auto Chick Drinkers in conjunction with Nipple lines would help the chicks grow evenly in size in the later stage.

Water supply can be tapped from Nipple lines by using rubber connector or from 1/2" pvc Pipe by using saddle connector.

Auto Chick Drinker MK2

Code : 350
